

Solutions from Bodhtree

sharetree

ShareTree empowers a mobile sales force with actionable insights based on analytics from data sources across the enterprise. Combining mobile features such as location services with key customer metrics enables sales teams to spend more time with prospects, facilitating accelerated business growth.

securetree

SecureTree enables organizations to centrally manage IT provisioning and user profile management across all applications in the organization. This integrated policy management solution eliminates the risk caused by redundant, disconnected, and frequently conflicting user management policies – saving organizations administrative overhead while improving security.

teletree

TeleTree is a self-service e-learning platform customized to the processes and applications unique to your organization. It provides users with context sensitive help through demos, interactive tutorials, and one-click access to live support video chat with remote assistance. TeleTree is integrated with enterprise ALM systems such as service desk, defect tracker and release management, and can be accessed via web and mobile devices. Enterprises using TeleTree see increased employee productivity and satisfaction with reduced overall support costs.

Midas – Unified, complete, bi-directional and open data integration between Salesforce.com and enterprise applications, databases and third party systems. With accurate and consistent data across multiple systems and databases, Midas enables seamless business transactions and effective decision-making across the enterprise.
